	INDEX	

The layout of the catalogues follows the same breakdown of parts as the old catalogues, i.e. Steering will be Section 2, Transmission Section 5 and so on. In most cases the picture will be in exploded view to allow for easier parts reference.

New Products Bulletins will be published to cover new parts introduced across the range of sections within this catalogue until such time as an updated version of the complete catalogue is produced.

The index is in both Sparex part number to OE part number and OE part number to Sparex part number. The index can be found at the rear of the catalogue.

Whilst every effort is made to ensure that the information compiled in this catalogue is correct, Sparex request that customers verify that the correct part has been purchased before fitting to the tractor. Normally a visual check against the part removed is all that is necessary. The need to carry out these checks is because of the on-going upgrades and modifications which are carried out by the OE tractor manufacturer. If the component is a gear or a shaft, then check the number of teeth or splines. If a clutch assembly, check the dimensions and whether the clutch is a dual or split torque. These simple and quick checks may save many hours of frustration and cost.
