GOODYEAR ENGINEERED PRODUCTS

Get durability, performance and value with air springs for truck, trailer, bus and cab seat applications.

Goodyear Engineered Products Air Springs offer:

- Bright yellow Mylar tag – easy identification
- Superior load cushioning – reduced in-transit damage
- Improved driver comfort and reduced driver fatigue
- Long life performance through advanced engineering

AIR SUSPENSION FEATURES & BENEFITS

Greater level of isolation...

* Reduces need for electrical and instrument maintenance.

* Reduces cab and body damage.

* Reduces axle, transmission and tire wear.

* Reduces downtime.

* Extends trailer life.

* Reduces driver fatigue.

For the owner-operator, air suspension...

* Improves isolation in both loaded and unloaded conditions.

* Broadens types of loads available for transport, including electronic equipment where air suspensions are required by the shipper.

* Greater driver comfort.

* Increased resale value.

* Protects hinges, lights, rivets, and all trailer hardware.

Reasons for increased air suspension usage:

* Suspension manufacturers have built in a greater degree of durability, longer warranty periods.

* Increased need for greater axle excursion.

SUPER-CUSHION®

Air Springs for Trucks, Trailers and Buses

Super-Cushion® air springs for trucks, trailers buses, and cab & seat springs protect cargo, provide constant-level hauling, and deliver long, trouble-free service.

Super-Cushion® air springs give your trucks, trailers and buses a new high in productivity and long life. They offer a quiet, cushioned ride. Truck, trailer and bus bodies last longer than with steel springs because there is less vibration. The driver rides in greater comfort, becomes less fatigued and stays more alert. Plus cargo has better protection from shock and vibration. Whenever you want to add an axle, Super-Cushion® air springs fit right in.

Super-Cushion® air springs, when used with leveling valves, also maintain consistent trim regardless of the load. That means clearance heights remain constant, and that trailer floors are flush with loading dock floors for ease of loading and unloading.

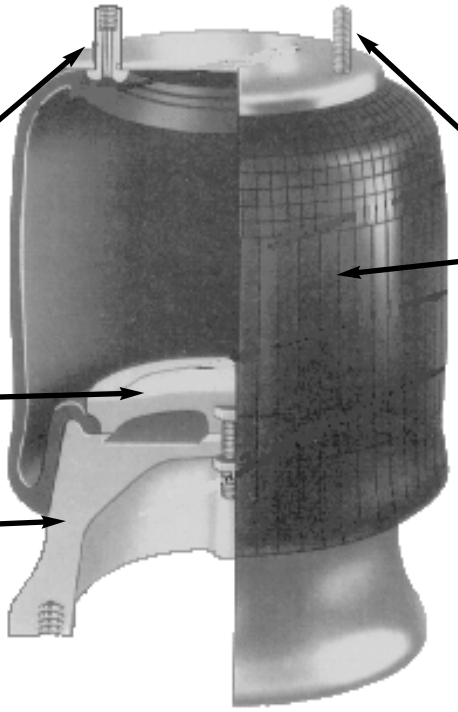

For driver comfort, load cushioning, and long life for your trucks, trailers, bus, and cab and seat springs specify Goodyear Engineered Products Super-Cushion® air springs.

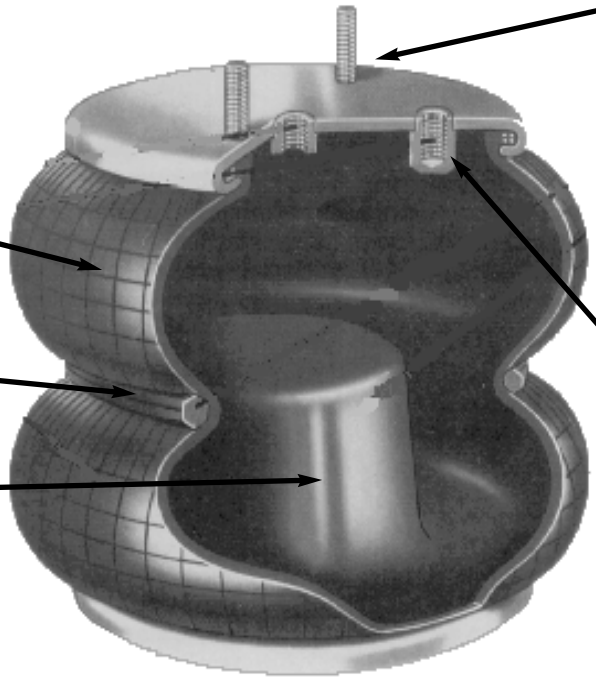

GOODYEAR
ENGINEERED PRODUCTS

Components Of Super-Cushion® Air Springs

ROLLING LOBE AIR SPRING (1R DESIGN)

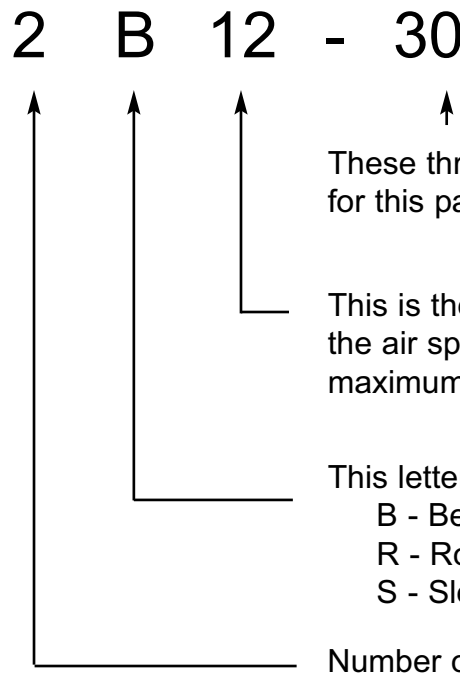

DOUBLE CONVOLUTION AIR SPRING (2B DESIGN)

GOODYEAR
ENGINEERED PRODUCTS

Unique Product Identification System

The Super-Cushion® air spring assembly part number consists of the Product Description and the Assembly Number. Elements of this system are shown in the following example for ordering a 2B12-300 Assembly:

These three numbers represent a unique identifier for this particular air spring.

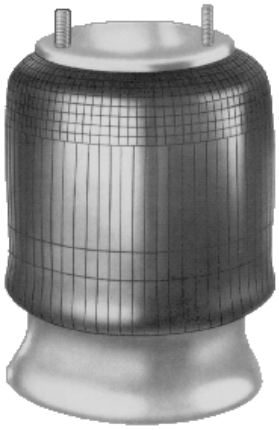

This is the nominal outside working diameter of the air spring assembly, in inches. (It is not the maximum diameter.)

This letter refers to the type of air spring:
- B - Bellows
- R - Rolling Lobe (bead type conventional)
- S - Sleeve (beadless rolling lobe type)

Number of convolutions in the assembly:
- 1 - single convolute
- 2 - double convolute
- 3 - triple convolute

How to Choose the Correct Replacement Air Spring

Many air springs appear to be similar in design and size at first glance. However, differences in the manufacturing techniques used for similar looking air springs may create substantial differences in operating dimensions. Specifically, the inflated (or operating) diameters of seemingly identical air springs will vary depending on the angle of the reinforcing fabric used in the flexible member.

For example, air spring models 1R12-092 and 1R13-039 appear very similar when first examined. However, the 1R12-092 model will inflate (operate) on vehicle at approximately 12" diameter, while the 1R13-039 model will operate at 13" diameter. In a substitution of the 1R13-039 air spring for the 1R12-092 in a truck trailer suspension, the larger air spring inflated diameter would most likely rub on another suspension component (such as a tire, shock absorber, or bracket) and cause failure within a few miles.

Air springs with interference type failures will not be considered for warranty claims. Be sure to select the correct replacement!

To select the proper Goodyear Engineered Products Super-Cushion® replacement air spring, use the procedure on the next page.

CAUTION: Numbers molded on the rubber bag (flexible member) are **NOT** the assembly part numbers. Bags with the same numbers are used with different combinations of top and bottom metals. They may or may not have an internal rubber bumper.

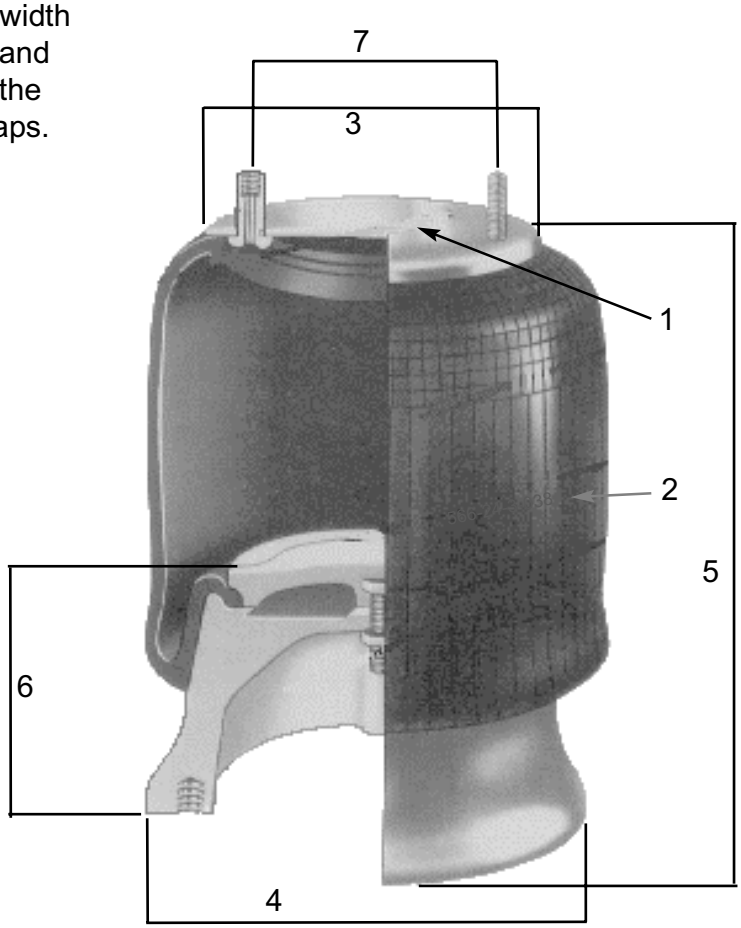

GOODYEAR
ENGINEERED PRODUCTS

Air Spring Identification

1. Start with the original equipment or aftermarket part number. It is usually located on a label affixed to the top plate of the air spring. If it is a Goodyear Engineered Products part number,
simply double check the product photo in the main body of the catalog. If you have an O.E. number or a Firestone number look in the cross-reference section.

2. If the O.E. part number or aftermarket part number is unknown you should begin your search with the bellows number. The number is molded into the rubber part of the air spring. Once identified you can narrow down the choices in the Flexible Members Index section.

3. Measure the width of the top plate and make a note of the bolt pattern or taps.

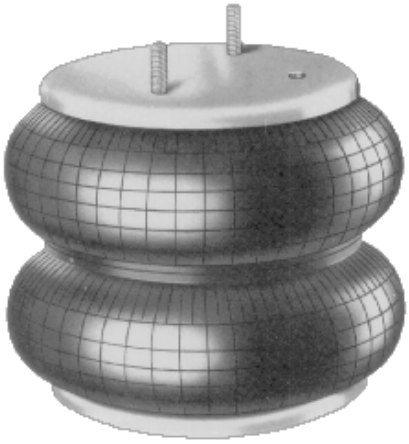

5. Measure the height of the air spring with no air pressure from the top plate to the bottom of the piston. This is the extended height.

4. Measure the width of the piston or bottom bead plate and make a note how the bolt pattern is oriented compared to the bolts on the top plate (Inline or Rotated). The view of this orientation should appear as if you are looking directly through a clear drinking glass from the top to bottom. This is how the catalog illustrations are drawn.

6. Compress the bag as far as possible with no air pressure and measure the height. This is the compressed height or minimum height.

7. Measure the distance from center to center of each bolt on the top and bottom of the air spring.

2B DESIGN

3B DESIGN

NOTES:

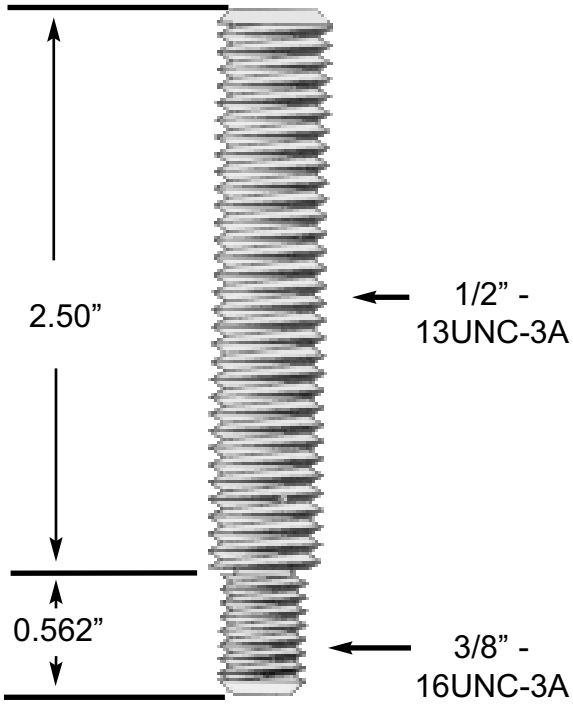

If the air spring you are replacing has studs (retainers) attached to the top or bottom plate, and the Goodyear Engineered Products Super-Cushion® air spring is identical except that it has recessed, blind taps, use the optional shoulder studs 578-92-9-056. (Pictured to the right.) Screw these into the plate using Locktite #271, or equivalent, thread lock to insure that the studs do not loosen in service.

If you wish to use cap screws or your own bolts to attach air springs with recessed blind nuts to the suspension, the screw must have 3/8-16 threads and must extend no more than 0.562” into the blind taps. Deeper penetration will cause the new air spring to leak and it cannot be repaired satisfactorily.

Air springs with damaged blind taps cannot be considered for warranty claims.

Air Spring Installation

Before you start installing air springs, make sure you have all the necessary tools and equipment to perform the repair safely. Familiarize yourself with the suspension on which you are performing the repair by reviewing the manufacturer's service guide.

If you are in doubt about something, ask for assistance from a qualified suspension specialist, the suspension manufacturer or the air spring manufacturer; it can save you a lot of time and aggravation later in the job.

Here are important tips to remember when installing a new unit:

**When disconnecting the leveling valve linkage, check for bent or broken linkage; if you find any, replace the damaged parts.

**Check shock absorbers for possible replacement. There are usually two warning signs indicating a worn shock. If it can be easily compressed or extended, it is time for a new unit. Also, if the vehicle has just been brought in for service, the shock should be warm to the touch. If not, it needs to be replaced. Remember, proper shock maintenance is one of the keys to long air spring life.

**Once the air lines are disconnected, check the line for cracks or damage. Also check for loose fittings, and replace any worn components.

**Some times the cause of air spring failure is visible and/or readily apparent; other times it is not. When it is not, inspect the air spring after you have removed it to determine the cause of failure and then correct the root cause of the problem.

**With the air spring removed, other parts of the air supension become more accessible. Check for wear or damage of the frame hangers, trailing arm bushings, torque rods, the trailing arms and the air spring mounts. Again, replace components where necessary.

**Also check the area around the air spring mounting to ensure there are not any obstacles or sharp edges that can damage the new air spring.

**Before installing the new unit, clean the air spring mounting plates to ensure proper attachment to the suspension.

**Always use new attaching bolts for the installation. Old bolts should never be reused since they may fail.

**Check the leveling arm for proper operation. Under load, the leveling arm should move from the neutral position up to the intake position. This lets air into the springs, which brings the arm back to the neutral position. When the load is removed, the leveling arm should move down to the exhaust position. That opens the exhaust valve, allowing air to escape until the arm returns to the neutral position.

Air Spring Installation

NOTES

Add Shoulder Stud #578-92-9-056 where required.

SAFETY & LONGEVITY RULES

1. Use Goodyear Engineered Products Flexible Members on Goodyear Engineered Product Pistons Only.

2. Replace ALL air springs on each axle instead of just one.

Following Rule 1 will prevent component failure due to interference with other supension parts or other truck/trailer components.

Following Rule 2 will give equal riding heights & bounce response to insure a stable and safer ride.

Any old air spring assemblies which are still serviceable could be carried

AIR SPRING TORQUE REQUIREMENTS

The following values are considered to be the maximum allowable torque for the designated mounting hardware.

Maximum Torque (ft. lbs.)	
3/8” - UNC BLIND TAPS	25
1/2” - UNC BOLT OR STUD	25
3/4” - UNC STUD	55
3/4” - UNF COMBO STUD	50

AIR FITTINGS	
1/4” NPTF	20
1/2” NPTF	20
3/4” NPTF	20

Air springs failing due to overtorqueing will not be considered for warranty claims.

GOODYEAR ENGINEERED PRODUCTS

Air Suspension Maintenance Vehicle Check-List

* Check air lines and fittings for leaks: rubbing on air spring.

* Check proper clearance around air spring when inflated. Generally, a minimum of 1-1/2" will allow for the increased diameter which occurs in heavy jounce.

* Periodically, check suspension for proper ride height. This dimension should be maintained +/- 1/4" to protect the springs and shocks from over-extension or frequent bottoming out of the suspension.

* When doing routine vehicle maintenance, block up the suspension and check for irregular wear or material build-up on the flexmember. Clean, if necessary, using a non-petroleum based cleaning solution.

* Check rolling lobe piston for material build-up. Hardened debris on the piston will shorten spring life and should be removed as part of your regular maintenance.

* Check shock absorbers for any signs of leaking hydraulic fluid, broken end connections, worn bushings or cylinders, and over extension.

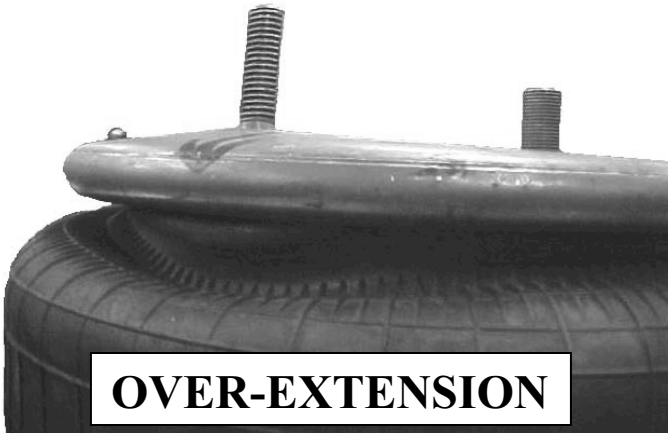

* Periodically, check nuts and bolts for proper torque. See manufacturer's manual for specific recommendations.

* Check height control valve to see that it is functioning properly. Clean or replace, if necessary. A properly maintained valve will save hundreds of dollars in unneeded maintenance expense.

Routine inspection of all of the above, according to a pre-determined mileage maintenance schedule will extend the life of your vehicle and reduce your overall maintenance expense.

GOODYEAR
ENGINEERED PRODUCTS

SELECTED NON-WARRANTABLE CONDITIONS

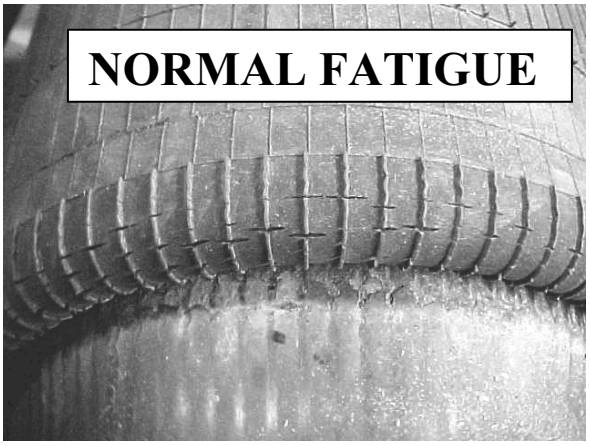

Over-Extension

- **Eventual tearing away of the bellows from the top plate or the bottom piston.**
- **The top plate may appear convex.**
- **Commonly seen on lift axle applications, particularly on trucks and tractors used in severe on/off road service such as construction, logging, or quarrying.**
- **Results from operation of the air spring beyond its rated maximum extended height or long-term operation at or near its maximum extended height.**

Possible causes:

- **Improper restraint of the downward travel of the axle** that **allows the air spring to operate beyond its rated maximum extended height.**
- **The ride position is too high due to improper adjustment or improper functioning of the leveling valve.**
  - **Can result in long-term operation of the air spring at or near its rated maximum extended height.**
- **Shock absorbers are not functioning properly, are missing or are improperly sized.**
- **Incorrect air spring for application (too short).**

Normal Cycle Fatigue

- **Fatigue cracks will appear on the outer surface of the rubber as a normal part of the ageing process.**
- **Minor cracks are not ordinarily a cause for removal.**
- **The air spring will still function properly provided there is no air leakage.**

SELECTED NON-WARRANTABLE CONDITIONS

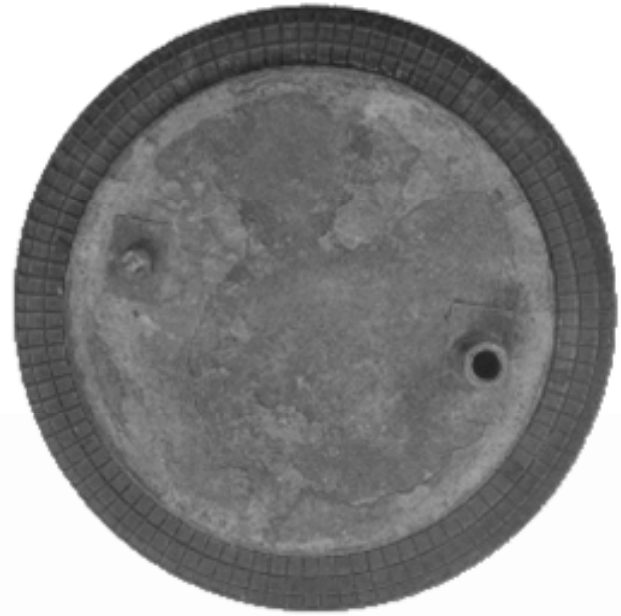

DAMAGE FROM CHEMICALS

Rubber Damage from Chemicals

- **Grease and oil are common examples that can cause this condition after prolonged contact with the rubber flexible member.**

Possible causes:

- **Excessive oil in the air supply.**
- **Excessive greasing of universal joints.**
- **Excessive greasing of the fifth wheel.**
- **Leaking seals in suspension components.**
- **Use of petroleum based cleaners on the air spring (use only soap and water for cleaning).**

CORROSION & IMPACTS

Corrosion and Impacts

- **Deterioration of the top plate or piston.**

Possible causes:

- **Chemical exposure.**
- **Road debris being flung into the piston causing a crack.**
- **Pitting from salt.**
- **Excessive oil or water in the air supply.**
- **Build-up of debris on the piston, top plate, or girdle hoops (keep clean with soap and water).**

SELECTED NON-WARRANTABLE CONDITIONS

External Abrasion

- **A hole rubbed into the side of the bellows.**

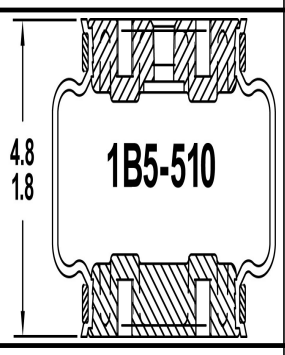

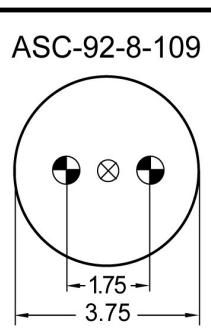

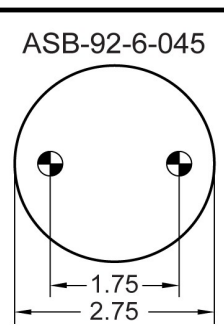

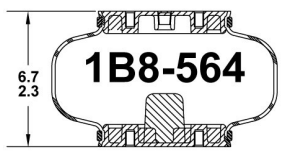

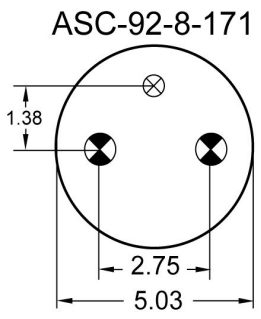

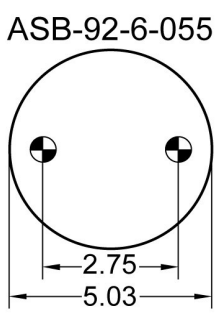

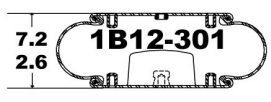

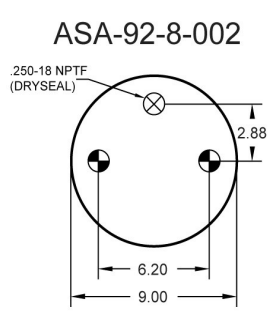

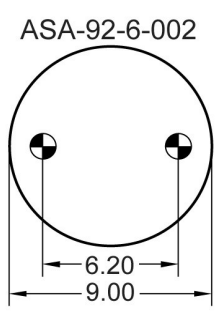

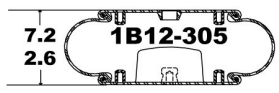

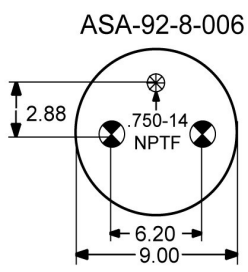

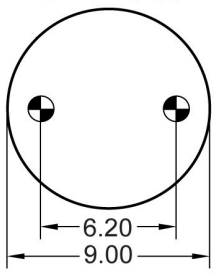

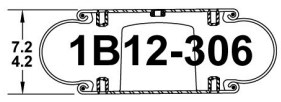

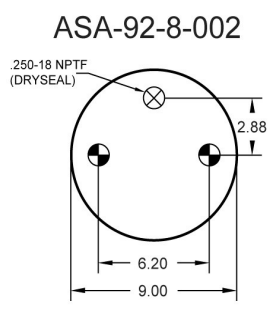

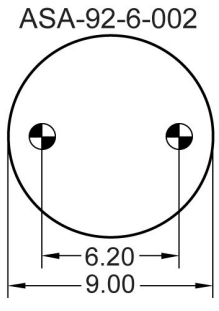

Possible causes:

- **Bellows contact with components on the vehicle (such as air lines).**
- **Road dirt and debris.**
- **Worn or failed parts in the suspension.**
  - **Worn bushing**
  - **Broken shock**
  - **misalignment**
- **Leak or pinch in air line causing spring to be under-inflated.**

Terms and Conditions

Veyance Technologies, Inc. and its affiliates offer a number of different terms and conditions for the purchase of materials, services, and products and the sale of products depending on the location of the transaction. These may vary from time to time and for different product categories and locations.

Please see our terms and conditions of sale at:

http://www.goodyearep.com/Terms.aspx

While every effort is made to keep these up to date, there may be discrepancies. If you have any questions, please ask for a copy of our terms and conditions when accepting or placing orders with us.
